Dear Hiring Team,

I am writing to apply for the remote Web Developer position. I am completing the Software Engineering Bootcamp at Moringa School, where I have been developing practical skills in HTML, CSS, JavaScript and React. I enjoy turning ideas into responsive, user-friendly websites and am keen to bring that focus and enthusiasm to your team.

One project that reflects my approach is Menda, a CBT-guided mental wellness web app designed with the Kenyan market in mind. Built with React (Vite), React Router and Tailwind CSS, it includes a guided intake assessment, a wellness chatbot, mood tracking and a crisis escalation flow. Working on this project has helped me think carefully about usability, clear interactions and how a website should respond to users' needs.

Before moving into software development, I worked as a Counselling Psychologist at Defence Forces Memorial Hospital and Moi Airbase Aviation Hospital. That experience strengthened my communication, problem-solving and teamwork skills, and taught me to consider different users' needs. Alongside my frontend skills, I have experience using Git and GitHub, testing with Jest, and working with Python and Flask on backend tasks.

I would welcome the opportunity to contribute to your web development work while continuing to grow as a developer. My portfolio includes my projects and CV, which you can view here: jeffkibet.github.io/My_Portfolio.

Thank you for considering my application. I would be glad to discuss how my skills and experience could contribute to your team.

Yours sincerely,

Jeff Kibet Kipruto
