Dear Hiring Manager,

I am applying for the Frontend Developer position at [Company Name]. I am completing the Software Engineering Bootcamp at Moringa School (May to November 2026), where I have been building responsive web applications with HTML/CSS, JavaScript, React and Tailwind CSS, and I am looking for a team where I can keep growing as a frontend developer.

The project that best shows how I work is Menda, a CBT-guided mental wellness web app for the Kenyan market. I am building it with React (Vite), React Router, Tailwind CSS and the Anthropic Claude API, and it includes a PHQ-9 intake assessment, an AI-powered CBT chatbot, mood tracking and a crisis escalation flow. It is deployed on Vercel. Designing it meant thinking carefully about users who may be anxious or in distress, for example how a crisis escalation should appear on screen, and that is the kind of user-focused thinking I want to bring to your product.

Before moving into software, I worked as a Counselling Psychologist at Defence Forces Memorial Hospital and Moi Airbase Aviation Hospital. There I delivered CBT and trauma-focused interventions, led crisis interventions, and trained nursing staff and junior clinicians. That work built my ability to listen closely, explain things clearly to non-specialists and collaborate with multidisciplinary teams, all of which carry over to working with designers, backend developers and product managers. On the technical side, I am comfortable with Git/GitHub, testing with Jest, and Python and Flask for working with backends.

I would welcome the chance to discuss how I can contribute to [Company Name]. My CV is attached, and you can see my work at github.com/JeffKibet. Thank you for your time and consideration.

Yours sincerely,

Jeff Kibet Kipruto
